

PAROC[®]dot POINTFUL LIFE

YOU CAN FIND DOTS EVERYWHERE, AS NATURE INTENDED.

THE RANGE OF VARIATION WITH A PAROC® dot FACADE

LEAVES ROOM FOR IMAGINATION AND MAKES THE SURFACE COME ALIVE.

PAROC® dot panels represent a new generation of design. Exciting shadings and fadings are achieved with small dots pressed on the steel surface. It is up to your imagination to create new visions, such as trees of a forest or waves of the sea inspired by nature. Design the whole building from your point of view!

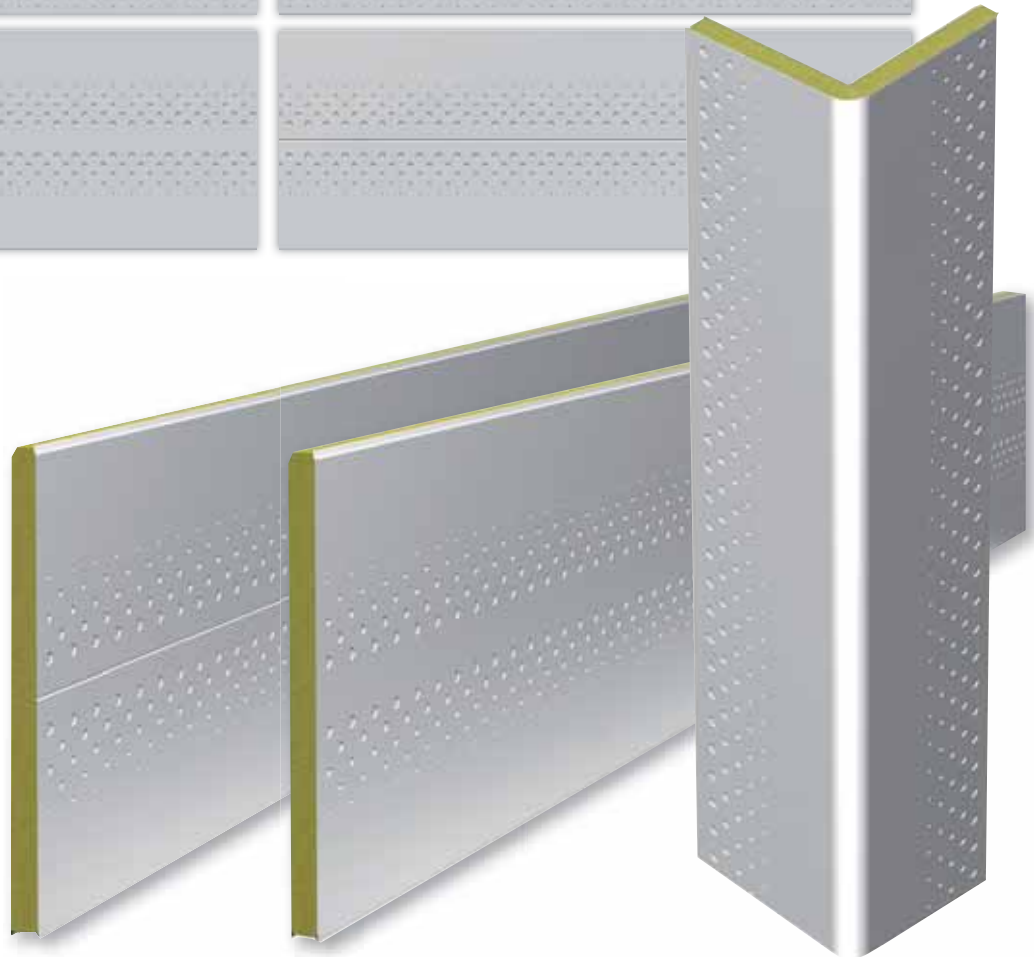

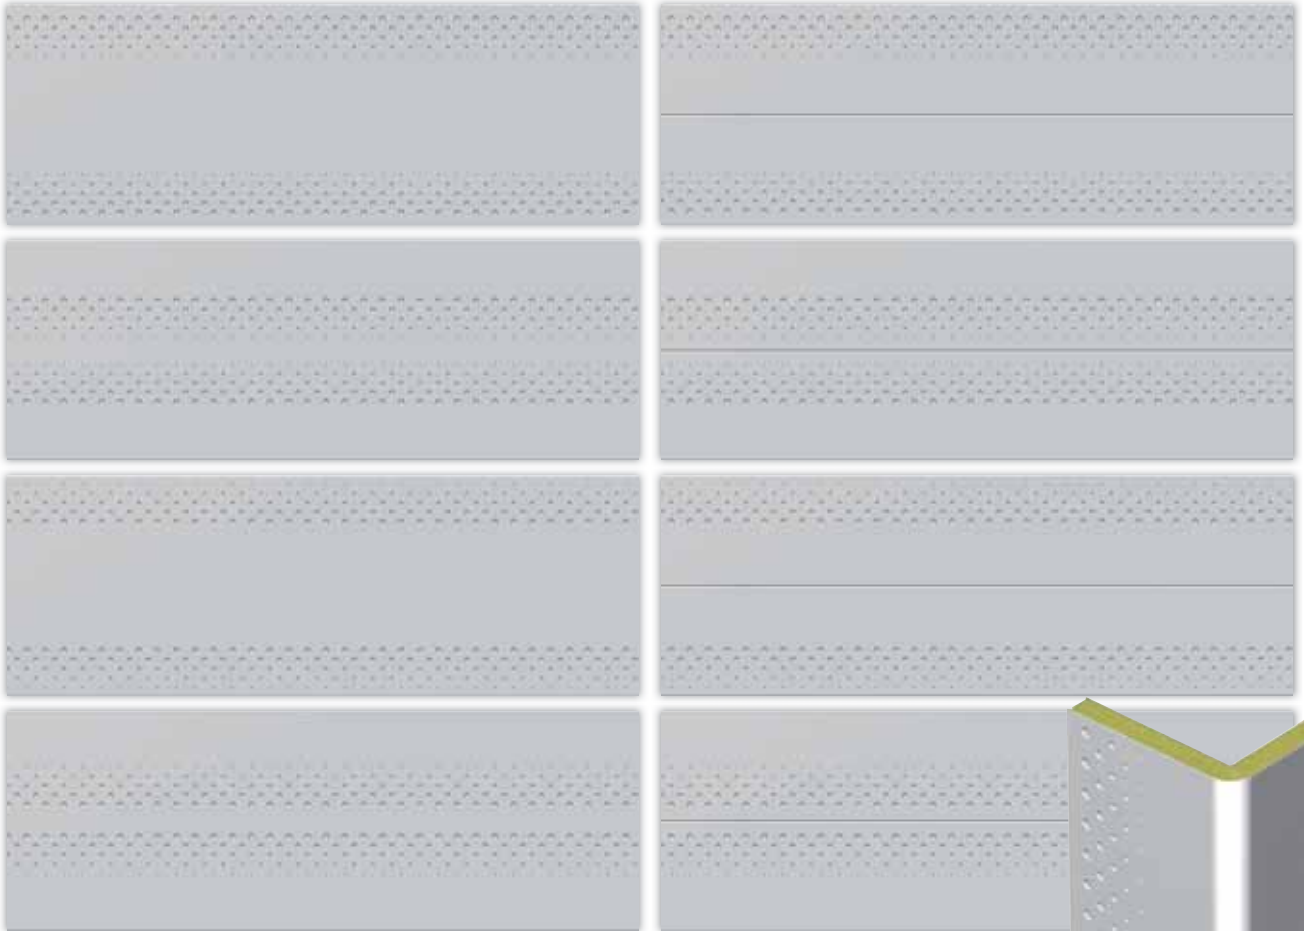

PAROC® dot panels provide an unlimited range of variation: the dot patterns are placed on the edges or in the middle of a panel. Various impressions in larger scale can be created by combining PAROC® dot panels with other PAROC® panels. And of course both horizontal and vertical installations are possible.

In case of vertical installation facades can be bound to a harmonious building with PAROC® dot corner panels.

Cases in point

In addition to their stylish appearance, PAROC® dot panels naturally meet the quality criteria set for all PAROC® panels: they are lightweight, safe and easy to install. Fire-proof, durable and insulating PAROC® dot panel is an ideal choice for facade material.

CERTIFIED QUALITY

Paroc Panel System conforms to ISO 9001 Quality Standard. This means that the full chain from raw materials, through production and deliveries operates according to the standard resulting in certified and constantly high quality. PAROC and AST are registered trade marks of Paroc Oy Ab.
