PAROC ROV 60 2 VALLEY WEDGE

QUICK DESIGN GUIDE

Usage

Most flat roofs have horizontal valleys. To avoid standing water on the roof, you can supplement with a fall towards roof drains. The roof drains should always be placed so that they are at the lowest point of the gutter valley even after any deflections that may occur.

The PAROC Valley Wedge solves this problem in a simple and functional way The wedges are placed on top of the existing roof slope or PAROC Roof Slope Board. The wedges are cut to provide a valley slope of 1:60 along the length and 1:15 across the width. The system is mirror-symmetrical - identical wedges are used in both directions.
